SUMMARY

Computer Science student at Towson University graduating May 2027 and AWS Certified Cloud Practitioner with experience building and deploying production full-stack applications. Develops maintainable software in Python, Java, and JavaScript using object-oriented design, REST APIs, SQL and NoSQL databases, Git-based CI/CD, and AI-assisted development tools. Experienced across the software development lifecycle, including design, implementation, testing, deployment, documentation, and root-cause debugging.

EDUCATION

Towson University

Sep 2023 – May 2027

B.S., Computer Science, Minor in Finance

Towson, MD

- Coursework: Data Structures, Algorithms, Object-Oriented Design, Databases, Computer Networks, Operating Systems
- Certifications: AWS Certified Cloud Practitioner (CLF-C02), Google AI Essentials, Google Prompting Essentials

TECHNICAL SKILLS

- **Languages:** Python, JavaScript (Node.js, React.js), Java, SQL, HTML/CSS
- **Backend & Data:** Express, REST API design, JWT authentication, bcrypt, PostgreSQL, MySQL, MongoDB Atlas, schema design and validation, normalization
- **Cloud & Tooling:** AWS, Render, Cloudinary, Git/GitHub, automated GitHub deployments (CI/CD), Linux, Software Development Lifecycle (SDLC)
- **AI & Automation:** AI-assisted workflow design, prompt engineering, LLM evaluation, Claude Code, MCP

EXPERIENCE

MAIK

Aug 2026 – Present

Junior AI Software Engineer

Silver Spring, MD

- Develop, test, and maintain software features, APIs, and internal tools for Oli™, MAIK's AI platform, under the guidance of senior engineers.
- Support AI software workflows through data preparation, prompt engineering, model evaluation, debugging, documentation, and quality assurance.
- Work directly with the Founder and VP of AI/ML, delivering assigned engineering tasks in a complete, functional, documented, and review-ready state.

Outlier AI

Jun 2024 – Feb 2026

AI Trainer

Remote

- Evaluated and corrected large language model outputs against detailed quality rubrics, producing structured feedback used to improve model reliability.
- Debugged AI-generated code across multiple programming languages, identifying logic errors, edge cases, and deviations from technical requirements.

PROJECTS

Job Tracker (jobblists.com)

2026 – Present

- Architected and deployed a production job-application tracker using React, Node.js, Express, MongoDB Atlas, and Render.
- Designed protected REST API routes with JWT authentication and bcrypt password hashing to isolate each user's application data.
- Integrated Cloudinary file storage and implemented tiered access controls for resume uploads and application limits.
- Configured automated GitHub deployments to support repeatable releases and maintain the production environment.

Squad Lynx

Dec 2025 – Present

- Designed a normalized relational database for users, teams, tryouts, and messaging, enforcing validation and data integrity across core workflows.
- Developed and tested backend APIs in Python and JavaScript for user accounts, event creation, recruitment, and messaging.
- Applied Git and Linux tooling to troubleshoot defects, validate features, and maintain reliable development workflows.

Team Web Application (group1-cosc484.onrender.com)

2026

Towson University

- Delivered full-stack application components through implementation, testing, debugging, and production deployment within a student engineering team.
- Resolved integration issues through version control, daily team communication, and coordinated review of shared code.
